Overview

*In accordance with Purdue policies to provide equal access to all people in our educational programs, all learners should easily be able to find each of these components in the **course syllabus and/or your course shell** in Brightspace. This document was revised for Spring 2026 (major changes from Spring or Fall 2025 are highlighted).*

Course Information (student- and public-facing)

- **Course number and title** ECE 27000-018 / 041 Introduction to Digital System Design
- **CRN** 63185 / 35845
- **Meeting day(s) and time(s).** *Class meeting days/times should match the Spring 2026 schedule.*

Time\Day	Sun	Mon	Tue	Wed	Th	Fri
7:30am-10:20am			039 Lab	024 Lab	023 Lab	025 Lab
8:30am-11:20am				007 Lab		013 Lab
10:30am-11:20am		018 Lecture		018 Lecture		018 Lecture
10:30am-1:20pm			036 Lab	005 Lab	020 Lab	037 Lab
1:30pm-4:20pm	Open Lab & Office Hour		032 Lab	027 Lab	026 Lab	028 Lab
2:30pm-5:20pm					019 Lab	004 Lab
4:30pm-5:20pm		041 Lecture		041 Lecture		041 Lecture
6:00pm-9:00pm		Open Lab & Office Hour	Open Lab & Office Hour	Open Lab & Office Hour	Open Lab& Office Hour	

'Open Lab' indicates that the lab will be staffed with GTAs and UTAs for assistance. Outside of these hours the lab will still be open 24/7, but no instructors will be present.

***All Open Labs also serve as office hours for the class.** Students may attend an open lab to receive assistance from the TAs regarding questions related to lectures and homework assignments in addition to labs.*

Change of lab section beyond the first week is not allowed.

- **Instructional Modality** (Face-to-Face, Hybrid/Hy-Flex, Async-Online, or Sync-Online) *Must match modality listed in the Spring 2026 schedule in myPurdue. See the Office of the Registrar's Purdue-Faculty-Course-Modality-Guidance for details.*
- **Course credit hours** 4.0
- **Prerequisites** (if any)

  ECE 20100 or ECE 20001 [may be taken concurrently]

Course Description

An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Serving as a core curriculum for both Electrical and Computer Engineering, ECE 270 is a prerequisite for upper-division Computer Engineering courses such as ECE 337, ECE 362, ECE 437, and ECE 477. It provides sophomore-level students with a basic overview of digital hardware engineering. Concepts and techniques introduced in this course will be expanded and used in subsequent Computer Engineering courses.

A minimum grade of C is required for Computer Engineering majors; D- for Electrical Engineering majors unless they plan to take ECE 362 as an advanced elective.

Learning Resources, Technology & Texts

Required Textbook

No textbook is required for this course.

Recommended Textbook

T1. Digital Design Principles and Practices – 5th Ed., John F. Wakerly, Prentice Hall, 2017
The 4th edition is also acceptable but the reading section numbers from the syllabus refer to the 5th edition only. Students may be able to find the corresponding reading sections of the 4th edition according to the lecture topics.

Your learning will be maximized if you read the text reading assignments prior to coming to lecture.

Reference Textbooks/Materials

If for some reason, you do not have access to the recommended textbook above, there are some reference materials as follows

R1. Designing Digital Systems with SystemVerilog, Brent E. Nelson (independently published), 978-1980926290, 340pp, April, 2018

This textbook provides instruction in SystemVerilog, the hardware description language (HDL) that will be used in the labs.

R2. 1800-2023 - IEEE Standard for SystemVerilog--Unified Hardware Design, Specification, and Verification Language

Available at https://ieeexplore.ieee.org/document/10458102

R3. Fundamentals of Digital Logic with Verilog Design by Stephen Brown and Zvonko Vranesic

R4. Digital Design and Computer Architecture by David Harris and Sarah Harris

R5. Fundamentals of Logic Design by Charles Roth Jr. and Larry Kinney

Additional help videos on breadboarding

If you have not taken ECE 20700 or ECE 20007, you may find it helpful to watch the videos below on how a breadboard works and how to use one:
YouTube: Breadboard Explained (2:39) - https://www.youtube.com/watch?v=QJPImfNpPrU
YouTube: How to Use a Breadboard (12:20) - https://www.youtube.com/watch?v=6WReFkfrUIk

Additional reading assignments on electric circuits

If you have not completed ECE 20100 or ECE 20001, you may find it helpful to learn basic electric circuit concepts from this 20-page tutorial by Bruce M. Fleischer: http://wakerly.org/DDPP/DDPP3_pdf/elecCkts.pdf.

Software/web resources

The course will use the following software and web tools:

- Brightspace – Lecture and Grades
- GitHub – Lab Content Delivery
- Gradescope – Lab Assignment Submissions
- eceFPGA Simulator – Lab Development/Debugging
- Visual Studio Code – Lab Development/Debugging
- AutoLab – Lab Grading
- Digilent WaveForms – Lab Debugging and Grading
- [Linux] Digilent Adept Runtime – Lab Debugging and Grading

The links to these resources will be posted in Brightspace at the start of the semester.

Hardware requirements

See Brightspace for the list of required lab materials.

You will need a personal computer to be able to access the various course websites used throughout this course. You may also use the lab machines for this purpose.

You do not need to purchase any typical lab instruments (eg. DMM, oscilloscope, power supply) as they will be made available to you throughout the course.

Supplement Instruction

There are Supplemental Instruction (SI) study sessions available for this course. These study groups are open to anyone enrolled in this course who would like to stay current with the course material and understand the material better. Attendance at these sessions is voluntary, but extremely beneficial for those who attend regularly. Times and locations for the help sessions can be found here: www.purdue.edu/si or on Brightspace. Students who attend these interactive sessions will find themselves working with peers as they compare notes, demonstrate and discuss pertinent problems and concepts, and share study and test-taking strategies. Students are asked to arrive with their student ID card, lecture notes and questions to these informal, peer-led study sessions.

Tutoring Support

The purpose of tutoring should be **remedial**, i.e. to go over material already covered in previous lectures in case you were unable to understand the content. You may choose to make use of tutoring support outside of the class, as long as the tutor is not directly helping you with your assignments. For help with assignments, you should make use of TA office hours and/or Piazza to ask for help.

Brightspace learning management system

The Brightspace page will be used for delivering lecture content and administering quizzes and homeworks.

Course Learning Outcomes

By the end of the course a student who successfully fulfills the course requirements will have demonstrated their ability to achieve 4 course learning objectives as follows:

1. an ability to analyze and design combinational logic circuits. [ABET Criterion 1]
2. an ability to analyze and design sequential logic circuits. [ABET Criterion 1]
3. an ability to analyze and design computer logic circuits. [ABET Criterion 1]
4. an ability to realize, test, and debug practical digital circuits. [ABET Criterions 2,6]

Criteria for passing course objectives

To pass learning objective 1, a student must earn a minimum score of 50 for both exams 1 and 2 or the final exam.

To pass learning objective 2, a student must earn a minimum score of 50 for exam 3 or the final exam.

To pass learning objective 3, a student must earn a minimum score of 50 for the arithmetic circuit quiz or the final exam.

To pass learning objective 4, a student must earn a minimum score of 60 on both lab practicals.

A student who passes all 4 learning objectives or earning a final grade C or above will pass the course learning objectives. The data collected are used only for course evaluation and improvement purposes. They do not affect or reflect your final grade in the course.

Assignments

Assignment Grade Breakdown

Assignments	Number	Points	Subtotal	Total
Labs	10 (Lab1-10), *Lab 0	1.5	15	40
Lab Practicals	2	12.5	25	
Homeworks	13	0.5 for HW 1-12, 1.0 for HW 13	7	60
Arithmetic Circuit Learning Objective Assessment	1	1	1	
Engagement Assessment Quizzes	+Pre-Class Quizzes +iClicker Quizzes	3 4	7	
Exams	Exam 1 (module 1) Exam 2 (module 2) Exam 3 (module 3) Comprehensive Final	15 15 15 15	45 (Best 3 out of 4 exam grades)	
Extra Credit	Final Course Evaluation Survey(1 point pending uploading of completion certificate email from IDP) - or - SPARK Challenge (1 point pending course staff's receipt of participation data from UGO by Friday noon the week before final grade submission) Other Opportunities TBD			1
Total				100 (+1)

*Lab 0 is ungraded but mandatory to set you up for lab. Failure to complete this will result in a penalty of -1.5 points (equivalent to one lab assignment).

+PCQs, +iClickers: PCQs and iClickers are graded on correctness, not just participation.

Your grade is calculated two ways, and you get whichever is higher: Option 1 - Direct scores: You get 70% credit if you max out the points, If you score lower, it scales down proportionally. Example: 35% on PCQs + 80% on iClickers = 1.5 + 4 = 5.5 points total. Option 2 - Use your exam grades instead: Your exam performance automatically covers both the quizzes and exams. Your exam points get multiplied by 1.156 (which is 52/45) if you did poorly on quizzes but well on exams.

Assignment Policy Breakdown

Assignments	Due Dates	Late Penalty
Labs	Checkoffs and Gradescope submission due during your Lab section	20% penalty for late checkoffs and submissions during an open lab within a week of the original deadline (before your next Lab section)
Lab Practical	Weeks 11 and 15 during your Lab section	N/A
Homework	Per Brightspace quiz settings (about 1 week after assignment)	NA
PCQs	Per Brightspace quiz settings (usually midnight before lecture)	N/A
iClickers	Scheduled as needed during classes and available to students in the classroom only (about 30s-90s per question)	NA
Exams	Exam 1 Week 5	N/A
	Exam 2 Week 9	
	Exam 3 Week 14	

	Final as per University Final Exam Schedule	
Extra Credit	As posted	N/A

*Accommodations for missed assignments will only be granted in extreme cases or with approved University documentation. University accommodations must come from ODOS, DRC, or similar offices. Documentation for extreme cases not approved by the University will be granted at the sole discretion of the instructional staff. Students must try to contact the staff as soon as possible, especially if pre-planned before the date of the absence.

Grading Scale

In this class, grades reflect the sum of your achievement of learning outcomes throughout the semester. You will accumulate points as described in the assignments portion above, with each assignment graded according to a rubric. At the end of the semester, final grades will be calculated by adding the total points earned and translating those numbers (out of 100) into the following letter grades (there will be no partial points or rounding).

A+:	97 and above
A:	93 up to (but not including) 97
	- For example, if your final grade was 96.99, your letter grade would only be an A.
A-:	90 up to (but not including) 93
B+:	87 up to (but not including) 90
B:	83 up to (but not including) 87
B-:	80 up to (but not including) 83
C+:	75 up to (but not including) 80
C:	70 up to (but not including) 75
C-:	67 up to (but not including) 70
D+:	63 up to (but not including) 67
D:	60 up to (but not including) 63
D-:	55 up to (but not including) 60
F:	Below 55

The instructor reserves the right to adjust all or some of the cutoffs down. This is to allow a constantly improving curriculum with potentially different assessments without significant drop in overall performance over previous semesters.

The official drop deadlines may be found on the Purdue academic calendar (https://catalog.purdue.edu/preview_program.php?catoid=18&poid=33634).
Note the following deadlines:

1. **January 26 - Last Day to Cancel a Course w/o Record**
2. **April 16 - Last Day to Withdraw with a W (Advisor approval required)**

Dropping this course after Jan 26 will be counted as an attempt, which counts towards the ECE's department maximum limit of attempts for any ECE class. Please contact the undergraduate office for clarification if you have any questions.

Incompletes

From Academic Regulations - Grades and Grade Reports:
"A grade of incomplete is a record of work that was interrupted by unavoidable absence or other causes beyond a student's control, which work was passing at the time it was interrupted and the completion of which does not require the student to repeat the course in order to obtain credit. The incomplete grade is not to be used as a substitute for a failing grade."

If you believe you will need a grade of incomplete for such a reason as defined above, you must send a request email to the course staff as soon as possible. Once it is approved, arrangements will be made for the paperwork to be filed and a plan to complete the work for this course to be created.

Attendance Policy

Lab attendance is required as your lab assignments have in-person checkoffs that must be completed in your lab section. Checkoffs cannot be done outside of your lab section, except for late checkoffs after the due date.

Students are expected to study related lecture materials and complete required PCQ quizzes on Brightspace before the class.

Lecture attendance is expected, students won't do well in this class without attending classes on a regular basis. Class attendance is required for iClicker quizzes and the mandatory arithmetic circuit assessment quiz.

Course Schedule

NOTE: A course schedule is required but does not have to be part of the syllabus document itself. It may be provided as a separate document and/or built in your course Brightspace shell. A schedule outlines the content of the course with dates for readings, assignments, midterms, quizzes, exams, etc. For assistance, see the Purdue Brightspace documentation website or email TLT@purdue.edu. ***Note that the week before finals is Quiet Period. As outlined in the Academic Regulations, courses that conduct or collect assessment during the final exam period shall refrain from assigning or collecting assessments during Quiet Period.***

Sample accessible schedule (using column headings and alt text):

Spring 2026	Topic & Readings	Assignments
Week 1 Jan. 12-16	Topic & reading	Assignments, due dates

Week 2 Jan. 19-23	Topic & reading	Assignments, due dates
Week 3 Jan. 26-30	Topic & reading	Assignments, due dates

* Schedule and assignments subject to change. Any changes will be posted in the learning management system.

You may also include a link to the Purdue Academic Calendar and key University dates for the semester.

Course Schedule (Subject to change)

Weekly Outline

Week	Lecture Topics	Lab Experiments
1	Course overview; number systems; logic gates	No Lab
2	Boolean algebra	Intro
3	CMOS logic circuits; logic levels; noise margins	Gates
4	Transition time; propagation delay; power	Boolean
5	Exam 1; SoP and PoS; logic minimization using kmaps;	Timing
6	Multiplexers; ROM, LUT, FPGA;	Verilog
7	Decoders; basis encoders; priority encoders	Multiplexers
8	Intro to sequential circuits	Decoders
9	Exam 2; State machine analysis and design; state machine in Verilog; state minimization	Flip-flops and Ring Counters
10	Spring Break; No Classes	
11	Latches and flip-flops	Lab Practical I
12	Registers and counters	State Machines
13	Sequential circuit timing	Sequence Lock
14	Exam3; Signed numbers; adders and subtractors; comparators	Lunar Lander

15	Shifters and multipliers	Lab Practical II

Full Schedule with Text Readings and Homework

Week - Day	Date	Textbook Readings Before Class	Lecture	Lab	Homework
1 M	01/12	Ch1 (skip 1.5, 1.8-1,9, 1.13)	Lec 0 - Course Overview	No Lab	
1 W	01/14	2.1-2.3	Lec 1.1 - Number Systems		
1 F	01/16	1.5, 7.3, 3.1.1-3.1.2	Lec 1.2 - Logic Gates		HW1 - Numbers, Gates, Boolean
2 M	01/19	MLK Day– No Class		Lab 0 (Material Distribution)	
2 W	01/21	3.1.3-3.1.4	Lec 1.3a - Boolean Algebra I		
2 F	01/23	3.1.5-3.1.6	Lec 1.3b - Boolean Algebra II		HW2 - Gates and Boolean
3 M	01/26	3.2	Review 1.1-2 and Labs 1-2	Lab 1 Gates	
3 W	01/28	1.8-1.9, 14.1-2	Lec 1.4a CMOS Circuits		
3 F	01/30	14.3	Lec 1.4b - Static Characteristics		HW3 - CMOS Circuits

4 M	02/02	14.4.1-14.4.2	Lec 1.4c - Dynamic Characteristics	Lab 2 Boolean	
4 W	02/04	14.4.3	Lec 1.4d - CMOS Power		
4 F	02/06	Exam 1 Learning Objectives and Practice	Review 1.2 and Labs 3-4		HW4-Practice Exam1
5 M	02/09	Exam 1 Practice	Exam 1 Review (Exam 1 this week)	Lab 3 Timing	
5 W	02/11	3.1.6	Lec 2.1a- SoP, PoS, K-Maps		
5 F	02/13	3.3	Lec 2.1b - Logic Minimization Using K-Maps		HW5 - SoP, PoS, K-Maps
6 M	02/16	6.4	Lec 2.2 - Multiplexers	Lab 4 Verilog	
6 W	02/18	6.1	Lec 2.3 - ROM, LUT, and FPGA		HW 6 - K-Maps and Multiplexers

6 F	02/20	5.1-5.5	Review 2.1-2.3 and Labs 5-6		
7 M	02/23	6.3.1-6.3.6	Lec 2.4 - Decoders	Lab 5 Multiplexers	
7 W	02/25	6.3.7, 7.2	Lec 2.5 -Basic and Priority Encoders		
7 F	02/27	3.4	Review 2.4-5, lab practical I Lec 2.6 - Timing Hazards;		HW7 - Decoders, Encoders, Hazards
8 M	03/02	9.1	Lec 3.1 Intro to Sequential Circuits	Lab 6 Decoders	
8 W	03/04	9.2	Lec 3.2 State Machines		
8 F	03/06	Exam 2 Learning Objectives and Practice	Exam 2 Review (Exam 2 in week 9)		HW8 - Practice Exam 2
9 M	03/09	9.6, 12.1	Lec 3.3 State Machines in Verilog	Lab 7 Intro to Seq Ckts	

9 W	03/11	9.3.2	Lec 3.4 State Minimization		HW9 - State Machines
9 F	03/13	10.2.1-10.2.3	Lec 3.5 Latches		
10	03/15-03/21	Spring Break- No Classes			
11 M	03/23	10.2.4-10.2.6, 10.3.2	Lec 3.6 Flip-Flops	Lab Practical I	
11 W	03/25	5.6-5.15	Review 3.1-3.4 and Lab 8-9		
11 F	03/27	11.2	Lec 3.7 Registers		HW10 - Latches, Flip-Flops, State Minimization
12 M	03/30	11.1	Lec 3.8 Counters	Lab 8 State Machine	
12 W	04/01	Final practice on sequential circuits	Review 3.5-8 and Lab 10		
12 F	04/03	13.4	Lec 3.9 Sequential Circuit Timing		HW11 -Flip-Flops, Registers, Counters, Timing
13 M	04/06	2.5	Lec 4.1 Signed Numbers	Lab 9 Sequence Lock	HW12 - Practice Exam 3

13 W	04/08	2.6, 8.1	Lec 4.2 Adders and Subtractors		
13 F	04/10	Exam 3 Practice	Exam 3 Review (Exam 3 in Week 14)		
14 M	04/13	7.4	Lec 4.3 Comparators	Lab 10 Lunar Lander	
14 W	04/15	2.8, 8.2-8.3	Lec 4.3 Shifters and Multipliers		
14 F	04/17	HDLBits Verilog Practice	Review 4.1-3 Lab Practical II		HW13 --Signed Numbers, Adders, More Arithmetic Circuits
15 M	04/20	Final Learning Objectives and Practice	Final Review	Lab Practical II	
15 W	04/22		Guest Lecture		
15 F	04/24		Required Arithmetic Circuit Quiz In-Class		
16 M	04/27				
16 W	04/29				
16 F	05/01	**Quiet Week - No Classes**			
Finals Week	05/04-05/09	**Final Exam (To be scheduled)**			

Academic Integrity

Using AI/LLM Tools (eg. ChatGPT)

Unless otherwise announced, students are **only permitted** to use generative AI/LLM tools for the purposes of experimentation, and in order to learn and practice material presented in the lectures **when other resources are not readily available.**

However, you must exercise caution while using them. These tools are trained to produce results based on a large amount of public information, all of which may not be accurate, and therefore the tools themselves may produce inaccurate and/or inconsistent results. Your first reference for all concepts covered in this class during lectures and labs must always be the course materials, such as lecture notes, lab reference notes and documents, and documents hosted on the Brightspace, or course staff.

Students are explicitly **prohibited** from presenting the output of such tools, or any portion of the output, (eg. ChatGPT's response to any prompt) as their own work in any type of course assignment. Such an action will be treated as an academic integrity violation, and will be handled the same way as any other academic integrity violation. When in doubt, always ask a member of course staff. Students are explicitly **prohibited** from accessing such tools during their lab section or inside the lab room during open lab time. Whenever course staff are present, students must ask them for assistance instead of using such tools.

While faculty and instructors do not own copyright to facts or ideas in their discipline, they do own copyright to their expression, explanation, and presentation of those facts and ideas in course notes, PowerPoint slides, etc. including assessments constructed for the course. As such, those instructor-generated materials including lecture notes, lab assignments, homework assignments and exam materials should never be uploaded to any third-party site (whether AI oriented or not).

Academic Integrity

Students in this class are expected to sign the Purdue Honor Pledge, which states that "As a Boilermaker pursuing academic excellence, I pledge to be honest and true in all that I do. Accountable together - We are Purdue."

All students in violation of the academic dishonesty policy will be reported to the Office of Students Rights and Responsibilities (OSRR) for possible disciplinary actions. In addition, they will be subject to grade penalties as follows:

A student in violation of the academic dishonesty policy for the first time will receive a NEGATIVE score for the whole assignment. For example, if a student cheats on a lab assignment, the student will get a -2 point penalty to their overall grade, since each lab is worth 2 points. This is to highlight that cheating on a lab is worse than not completing the lab at all.

Students with repeated violations of the academic dishonesty policy will receive a F grade.

All ***instances of scholastic dishonesty using the OSRR reporting form.***

Allowed Collaboration for Learning

ECE 27000 is an introductory-level class in which you learn the foundational concepts of digital design. For any foundational concept, you must exhibit a **personal understanding** of that concept. Submitting collaboratively written code does not prove your understanding of the code, which is why all the assignments need to be completed individually.

For lab assignments, it is acceptable to discuss concepts and approaches to solving problems with your peers, but the submitted work for any assignment must be entirely your own. You may not share your solution to an assignment with your peers. Doing so is an Academic Integrity violation.

Examples of Academic Integrity Violations

A non-exhaustive list of actions that can be construed as academic dishonesty:

- Sharing solutions with other students on coursework before it is due for submission
- Copying the work of another student (past or present) and representing that work as your own
- Obtaining an assignment solution from a website instead of doing it yourself
- Letting another student use your built circuit for their own lab demos
- Using another student's circuit for your own lab demonstration
- Attempting to fake circuit evaluation results by submitting forged AutoLab completion codes
- Modifying a graded lab or homework assignment and submitting it for reevaluation
- Using another student's (past or present) lab files
- Publicly posting solutions to lab experiments (this includes public GitHub repositories), even after they are due
- Discussing exam questions before the exam is over for all students
- Working with other students on questions during exams, whether online or face-to-face
- Using a second unauthorized electronic device during an online exam
- Sharing class quiz answers
- **Using generative AI/LLM tools like ChatGPT and submitting it as your own work**
- **Creating a fork or pull request of the private student ECE 27000 GitHub repository**

Nondiscrimination Statement

Purdue University is committed to maintaining a community that recognizes and values the inherent worth and dignity of every person; fosters tolerance, sensitivity, understanding, and mutual respect among its members; and encourages each individual to strive to reach his or her potential. A hyperlink to Purdue's full Nondiscrimination Policy Statement is included in the Academic Resources table on your Brightspace homepage.

Accessibility

*Purdue offers **resources to help you make your course and learning materials accessible to all students** and to provide required accommodations for individual students. These include:*

ADA Title II digital accessibility for all students

- *The new **ADA Title II accessibility guidelines** and Purdue's **Instructional Material ADA Readiness webpage** invite us to think about accessibility as a standard part of preparing materials. When materials are accessible from the beginning, no one has to seek out adjustments for things that could already meet a wide range of needs. This approach helps promote equal access for and aligns with Purdue's commitment to making all "education, employment, services, programs and activities accessible" as outlined on the Office for Civil Rights website on accessibility resources.*
- *The scope of the new standards is broad, applying to all web and mobile content available to the public or used in services, programs, and activities. Three main areas covered in that scope – instructional documents, videos and audio, and images and color contrast – are specifically addressed on the Innovative Learning Digital Instructional Materials - Accessibility Checklist webpage.*
- *As course instructor, you are primarily responsible for the accessibility of digital course materials, which includes those used for peer-to-peer interaction in Brightspace. See the ADA Title II Compliance FAQs for details.*

Accommodations for disabled students

- *The Disability Resource Center (DRC) is a key partner in providing services, resources, and programs that enable disabled students at Purdue to fully participate in curricular and co-curricular offerings. Check out the DRC Instructor Resources website for accommodations it provides (including when/how to request testing accommodations), and tips for creating accessible courses and materials.*

  *Please read information on Student Course Accommodation Letters carefully. Note that you may receive a Course Accommodation Letter at any point in the semester through your Purdue email. Each letter will identify a DRC Access Consultant assigned to the student and is your contact if you have questions about the implementation of an accommodation specific to that student. Therefore, **do not require students** to send their letters to you by a certain date or to speak with you in order to receive an accommodation.*

  ***Testing accommodations** are granted by the DRC to students whose condition may impact their equal access to learning assessments. To ensure this accessibility it is the responsibility of students to request accommodations, the responsibility of instructors to fulfill accommodations and Purdue Testing Service's responsibility to be a resource for both parties. See Instructor Resources for Accommodated Testing - Purdue Testing Services for details. Courses at Purdue in Indianapolis can seek testing support from the onsite DRC staff.*

  The DRC website provides a sample syllabus statement as well as other Instructor Resources such as the Usable Materials Center. You are also encouraged to contact the Disability Resource Center at: drc@purdue.edu or by phone: 765-494-1247.

- *The Faculty Accessibility Consultant in the Center for Instructional Excellence, Dr. Leslie Miller, directly supports faculty and instructors as they implement students' required accommodations as determined by the DRC.*

Mental Health/Wellness Statement

A mental health statement is required on your syllabus (see University Senate Document 19-18). You are urged to speak to students at least during the first week of classes about the various resources available to them regarding mental health. Familiarize yourself with the Health and Well-Being Resources listed on the Brightspace landing page and point to them as appropriate. The ODOS' Well-Being Resources page provides an overview of the network of support available to students and how you can help.

Suggestions & tips:

1. *Students are more likely to access mental health and wellness resources if instructors make specific reference to help-seeking as a life skill rather than as an indication of weakness. We seek to foster a culture at Purdue where students are explicitly encouraged and even expected to access the resources available.*
2. *Please make note of Therapy Assistance Online (TAO), a web and app-based mental health resource available courtesy of CAPS. A link to it is included under the Health and Well-Being Resources of the Student widget on the Brightspace homepage. TAO is available to students, faculty, and staff at any time by creating an account on the TAO Connect website, or downloading the app from the App Store or Google Play. It offers free, confidential well-being resources through a self-guided program informed by psychotherapy research and strategies that help overcome anxiety, depression and other concerns. It provides accessible and effective resources including short videos, brief exercises and self-reflection tools. See the CAPS TAO webpage for more details and a Q&A.*
3. *Student of concern reporting (anyone at Purdue may submit a report if they are unsure where to go or in what way they can help a student - it does not need to be an emergency).*

Mental Health/Wellness Statement sample language

Emergency Preparedness

*Instructors of all courses must have a presence in and maintain a point of contact in Brightspace in case of emergency. Please review the **Emergency Preparedness Safety Briefing** prior to your first day of class and share your safety briefing with students the first day of each course in each building. You may also refer students to the Emergency Preparedness website. Since some details of your course's Emergency Preparedness plan vary depending on the classroom it is helpful to emphasize those details with your students in your syllabus and during the first day of each class. Remember to define procedures for communicating with the students and submitting assignments. Please share the Emergency Preparedness Safety Briefing with your students. Each Purdue West Lafayette, Indianapolis, off-campus, and Polytechnic sites has different evacuation & shelter locations; see the specific Building Emergency Plan webpage for details.*

Related Considerations and Guidelines

1. *Keep your cell phone on to receive a Purdue ALERT text message.*
2. *Log into a Purdue computer connected to the network to receive any Desktop Popup Alerts.*

3. *If you have a "no cell phone" in class policy, allow one or two students who have signed up for Purdue ALERT to keep their phones on to receive any alerts*

Basic Needs Program (recommended)

The Purdue Faculty Senate encourages the inclusion of a statement highlighting the importance of students' basic needs. Purdue has a range of ways to support students through times of struggle and insecurity, primarily through ODOS. Please familiarize yourself with the following resources, some of which have been recently updated:

- *The Purdue's Basic Needs Program seeks to improve student success at our West Lafayette location by providing support to students who have unmet basic needs that can be addressed in the community. This is done by coordinating with campus and community partners, identifying community resources available to students, communicating with students about and connecting them to resources for which they may be eligible, and directly serving students in response to referral and outreach. This program helps students access essential resources in the West Lafayette community with:*
  - *Food and housing assistance*
  - *Transportation support*
  - *Physical, mental, and behavioral health services*
  - *Childcare resources*
  - *Technology access*
- *To refer West Lafayette students or explore available resources, please visit the Basic Needs Program website, email basicneeds@purdue.edu.*
- *Students enrolled in Indianapolis may find some information helpful, but not all resources are available outside of West Lafayette. To connect with a Student Support Generalist on the Indianapolis campus, contact them by phone at 765-495-7797 or by emailing studentlifeindy@purdue.edu.*
- *For other types of support, visit the ODOS services and information portal.*
