PURDUE
UNIVERSITY

(As of January 15, 2026)

Course Information

Course number and title: ECE 36800 Data Structures
CRN: 17208
Meeting days and times: TR 4:30-5:45pm
Meeting place: University Church 114
Instructional modality: Face-to-face lectures
Course credit hours: 3.000 credits
Course web page: Brightspace
Prerequisites: ECE 26400 Advanced C Programming Minimum Grade of C

Information About the Instructor

Name of the instructor: Cheng-Kok Koh
Office Location: MSEE 254
Phone number: 765-496-3683
Email Address: chengkok@purdue.edu
Office hours, times and location: See Brightspace "Content->Office hours" for details

Course Description

Provides insight into the use of data structures. Topics include stacks, queues and lists, trees, graphs, sorting, searching, and hashing.

Learning Outcomes

By the end of the course, you will be able to:

1. Implement basic data structures, including stacks, queues, and trees. This outcome addresses ABET standards: (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. (2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. (6) An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
    - Methods of Evaluation: Non-programming homework exercises, programming assignments, mid-term and final exams, and maybe quizzes
2. Analyze time complexity and space complexity of algorithms. This outcome addresses ABET standards: (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. (6) An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.

    - Methods of Evaluation: Non-programming homework exercises, mid-term and final exams, and maybe quizzes
3. Apply appropriate sorting and searching algorithms for a given application. This outcome addresses ABET standards: (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. (2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. (6) An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
    - Methods of Evaluation: Non-programming homework exercises, programming assignments, mid-term and final exams, and maybe quizzes
4. Apply graph theoretic techniques, data structures, and algorithms for problem solving. This outcome addresses ABET standards: (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. (2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. (6) An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
    - Methods of Evaluation: Non-programming homework exercises, programming assignments, mid-term and final exams, and maybe quizzes
5. Design and implement appropriate data structures and algorithms based on knowledge gained in learning outcomes (1)--(4) for engineering applications. This outcome addresses ABET standards: (1) An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. (2) An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. (6) An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
    - Methods of Evaluation: Non-programming homework exercises, programming assignments, and final exam

How to Succeed in this Course

If you want to be a successful student:

- Be self-motivated and self-disciplined.
- Be willing to ask questions (on Piazza forum, in office, in class).
- Be willing to seek help. **Seeking help is not a weakness. If you need help to get over some hurdles, just reach out to us early.**
- Be willing to put in consistent effort
    - Keep up with the lecture materials
    - Clear your doubts before the next lecture
    - Review recorded lectures and revise your notes as you gain new insights
    - Read the homework exercises and programming assignments as soon as they are released
    - Do small chunk of work on homework and assignment everyday (set a goal of 50-100 lines of code every day, for example)

In contrast, here are some common behaviors that lead to failing the course.

- Read the materials only on the night before the class/exam.
- Do not review materials after the class.
- Wait until the last day to begin assignments.
- Forget about deadlines.
- Engage in academic dishonesty.

Learning Resources, Technology, & Texts

- Required Textbooks: The required textbooks are available in hardcopy or e-textbook form. Either version is acceptable. You are expected to read the relevant pages in the textbooks before and after class.
    - Algorithms in C, Parts 1-4: Fundamentals, Data Structures, Sorting, Searching, Third edition, Robert Sedgewick, Addison Wesley, 1999, ISBN-10: 0201314525, ISBN-13:9780201314526
    - Algorithms in C, Part 5: Graph Algorithms, Third edition, Robert Sedgewick, Addison Wesley, 2002, ISBN-10: 0201316633, ISBN-13: 9780201316636
- Additional Readings: Lecture slides will also be made available before class.
    - You are expected to read the lecture slides before and after class.
- Software/web resources.
    - We plan on recording in-person lectures (Boilercast or other means). Some lectures may be conducted online using Microsoft Teams when the instructor is not in town.
    - You should install Microsoft Teams on your laptop/computer (see https://teams.microsoft.com/downloads). You have been added to the team "ENGR-ECE-C-S26-36800 Data Structures".
    - You are expected to develop and test your programs on eceprog.ecn.purdue.edu. You will submit your completed programming assignment to Brightspace. You will receive the feedback (without grade) by an email message and the grade will be posted on Brightspace.
    - You should learn to use ssh (secure shell) to access eceprog.ecn.purdue.edu directly
        - From a terminal, you can use command "ssh userid@eceprog.ecn.purdue.edu", where userid is your login name. When you are prompted for password, type in your password followed by ",push". Note that when you type your password, nothing will show on the terminal. You will have to approve on Duo Mobile.
        - Access your files on the ECE server directly through your computer
        - Use ssh to log in to any of the server and then type "pwd" to find out the path of your home directory. It is typically of the form "/home/shay/a/userid" where "shay" is the server hosting your directory, "a" is the disk partition, and "userid" is your user id.
        - Follow the appropriate instructions in the following links to map the network drive.
            - If you are not on Purdue network, you have to use Cisco AnyConnect to make connections through Purdue VPN.
                - Go to webvpn.purdue.edu to download, use your username and password (without, ",push), and approve on Duo Mobile
                - Install Cisco AnyConnect, and
                - Connect to webvpn2.purdue, use your username and password (without ",push"), and approve on Duo Mobile
                - See for details: https://service.purdue.edu/TDClient/32/Purdue/KB/ArticleDet?ID=221&_ga=2.40615462.5869048.1724358462-411143278.1602193349&_gl=1*su6qe7*_gcl_au*MTgzMzYzMTM5OC4xNzIyMDMxODcz*_ga*NDExMTQzMjc4LjE2MDIxOTMzNDk.*_ga_PF1CYQ27F6*MTcyNDM1ODQ2Mi4xMS4wLjE3MjQzNTg0NzAuMC4wLjA.
            - For linux, use the "connect to" feature of the "file" app to map the drive: "sftp://eceprog.ecn.purdue.edu/home/server/a/userid"
            - For windows computers, follow the following instructions:
                - https://engineering.purdue.edu/ECN/Support/KB/Docs/MappingECNDriveWin8
                - When you are prompted to enter your credentials, you should use "boilerad\userid" if you are on a non-ECN machine. In general, you are not on a

ECN machine if you are using your laptop/computer. Only computers/terminals that are connected through ethernet cable in ECE buildings could be ECN machines.
        - For mac users: https://engineering.purdue.edu/ECN/Support/KB/Docs/MacOSXConnectingToSMB
    - If you are not familiar with terminal access, you may access eceprog.ecn.purdue.edu through a browser and the link https://desktop.eceprog.ecn.purdue.edu. Alternatively, you can use ThinLinc client to access desktop.eceprog.ecn.purdue.edu. Please follow the instructions from https://engineering.purdue.edu/ECN/Support/KB/Docs/ECEThinlinc.
    - You will submit your solutions for non-programming homework exercises to Gradescope. All the non-programming homework exercises could be accessed through Gradescope. You will receive the grades on Gradescope and the grades will also be posted on Brightspace.
    - Though extremely unlikely, we may use Gradescope to conduct the mid-term and final exams. If we use Gradescope for mid-term or final exams, you are expected to take the exam in the classroom using your laptop or tablet.
    - We will be using Piazza for online discussions. You may ask questions (and respond to questions from your classmates) related to the course on Piazza. We will not be using the "Discussions" page on Brightspace.
- Brightspace page
    - You can access the course via Brightspace. Lecture slides, recorded videos, programming assignments, and other relevant course materials will be released through Brightspace. It is strongly suggested that you explore and become familiar not only with the site navigation, but with content and resources available for this course.
- Resources available for students: The Student Resources "widget," located on the Brightspace homepage, includes direct links to student resources for Technology, Academic, Campus, and Health and Well-Being.

Course Logistics

- This class will follow the Eastern Time Zone with daylight saving starting on March 9, 2025 2:00am.
- Announcements will be made through Brightspace. It is your responsibility to check Brightspace for these announcements regularly.
- All non-programming homework exercises (HW) will be released at least a week before it is due. You may expect a non-programming homework exercise released every Friday except the last week of class. All non-programming homework exercises are due by 11:59 pm on the due date listed in the course schedule. You may expect a non-programming homework exercise due every Friday other than the Friday in the first week. Your submit your completed non-programming homework exercise through Gradescope.
- All programming assignments (PA) will be released at least three weeks before it is due. However, you typically have only a two-week gap between the deadlines of two consecutive programming assignments. You may expect a programming assignment released every two weeks, starting on the Monday of the second week of class. Every programming assignment, except the final programming assignment, is due on a Monday by 11:59pm. The final programming assignment is due on a Friday by 11:59pm. You submit your completed programming assignment through Brightspace.
- All exams (EX) are comprehensive. They are open-book and open-notes. The mid-term exams (Exams 1 and 2) are conducted on Thursdays of week 7 and week 13 from 4:30pm to 5:45pm. They will be an hour each. Exam 3 (final) will be a two-hour exam. The university will announce the date and time of exam 3 later.
- Use Brightspace->Content->Course Schedule->Upcoming or Brightspace->Content->Course Schedule->Full Schedule to keep track of all non-programming homework exercises, programming assignments, and exams.
- **All late submissions will receive 0 points.**

Instructor's Office Hours

The instructor will conduct in-person office hours according to the schedule posted on Brightspace. You may also get help from the teaching staff or fellow classmates by posting on Piazza.

Instructor's Email Availability and Policies

The instructor will be available via email daily and will try to respond as soon as possible (generally within 24-48) hours. When emailing the instructor, please place the course number and the topic in the subject line of the email (*e.g.,* ECE 36800 – HW2 Question 1). This will help the instructor tremendously in locating and responding to your emails quickly. A better way to reach the teaching staff is by posting your questions on Piazza.

Emails regarding a late submission after a deadline has passed will not be answered.

TA Office Hours

All TA office hours will be conducted in BHEE 206. The TAs will maintain a queue on MS Teams (called "TA Office hours queue"). When you need help from a TA, enter the topic that you want help from a TA, your Purdue email ID in the queue, and your location in the room. Be concise but sufficiently descriptive when you specify the topic with which you want a TA to help. For example, "PA3 first output file" is sufficiently clear. On the other hand, "PA3" is not. If it relates to debugging of your program, "PA1 debugging" is a good title. If it relates to understanding the concepts behind the programming assignment, "PA1 clarification" or "PA2 concept" would be good.

When a TA is ready, the TA will try to locate you in the room. If the TA could not locate you based on your description in the request, the TA may move on to the next request (but keep you in the queue). Your request will be deleted from the queue after the TA has helped you. If you require additional help after that, you can add your request to the end of the queue.

You may also get help from the teaching staff or fellow classmates by posting on Piazza.

Please keep in mind that the TAs are here to help you complete your own work. They are not supposed to complete your work for you. They have been instructed not to provide solutions to you, but to guide you toward finding your own solutions. Do not take your frustrations out on them.

Assignments and Points

Your learning will be assessed through a combination of non-programming homework exercises (HW), programming assignments (PA), mid-term and final exams (EX), and possibly quizzes. There will be 11 HWs, 5 PAs, 2 mid-term exams, and 1 final exam.

Assignments	Due	Points
Non-programming homework exercises (HW)	Every Friday 11:59pm, starting from the second week.	5
Programming assignments (PA)	Every PA is due on a Monday 11:59pm.	45
Mid-term exams (EX)	Thursday of Week 7 and Thursday of week 13.	2/3 of 50 ≈ 33.33

Final Exam (EX)	TBA.	1/3 of 50 ≈ 16.67

- All non-programming homework exercises (5 points altogether) carry the same weight. Not all questions in a homework exercise will be graded.
- All programming assignments (45 points altogether) carry the same weight. Code will be evaluated on a Linux platform (similar to eceprog.ecn.purdue.edu). **If your code has memory errors or leaks memory, 50% of that assignment will be deducted**. If we find your code to be disorganized, unclear, or not well documented, we may deduct up to 50% of that assignment. You will have a chance for a re-submission for each assignment. We use the maximum score of the original submission and the re-submission as your score for the assignment.
- All mid-term and final exams are open-book and open-notes. **They will always be comprehensive, covering materials taught up to the week before the exam.** The exams can be a mix of multiple choice, short answer, and "essay" questions. Past mid-term exams (without solutions) are available for you to practice. All mid-term exams will carry the same weight. Past final exams are not released.

Missed or Late Work

We do not accept late submissions. Submission links will not be available once the deadline has passed.

Missed assignments/exams may only be made up when you notify the instructor ahead of time with an explanation and plan for completion. These requests will be accepted at instructor's discretion. Asking for an extension does not guarantee it will be granted.

Grading Scale

Students must achieve all learning outcomes to receive a passing grade. Achieving all learning outcomes is a necessary (but not sufficient condition) to receive a passing grade. At least two opportunities will be provided for a student to demonstrate that he/she has achieved the learning outcomes:

1. Non-programming homework exercises (HW)
2. Programming assignments (PA)
3. Mid-term and final exams (EX)

You achieve a learning outcome if you score 50% or more on one of the evaluation instruments.

Assuming that you have achieved all learning outcomes, your grade is determined by the most stringent conditions satisfied by your (HW+PA) score and (HW+PA+EX) score according to the following table:

HW+PA (out of 50)		HW+PA+EX (out of 100)	Grade
≥ 40	AND	≥ 80	A
≥ 35	AND	≥ 70	B
≥ 30	AND	≥ 60	C
≥ 25	AND	≥ 50	D
< 25	OR	< 50	F

For example, if your (HW+PA) score is 41 and your (HW+PA+EX) is 79.99, you receive a grade of B. If your (HW+PA) score is 33 and your (HW+PA+EX) score is 80, you receive a grade of C.

The instructor has the discretion to "improve" your grade. The instructor may release quizzes during lectures (unannounced). These quizzes allow you to earn credits that the instructor may then use to improve your grade. For

example, the instructor may improve your grade of B to B+, A-, or even A. The final grade you receive will not be lower than the grade determined by your (HW+PA) score and your (HW+PA+EX) score.

Incompletes

A grade of incomplete (I) will be given only in unusual circumstances. To receive an "I" grade, a written request must be submitted prior to April 24, 2026, and approved by the instructor. The request must describe the circumstances, along with a proposed timeline for completing the course work. Submitting a request does not ensure that an incomplete grade will be granted. If granted, you will be required to fill out and sign an "Incomplete Contract" form that will be turned in with the course grades. Any requests made after the course is completed will not be considered for an incomplete grade.

Attendance Policy

This course follows Purdue's academic regulations regarding attendance, which states that students are expected to be present for every meeting of the classes in which they are enrolled. Students are expected to attend all classes in-person unless they are ill or otherwise unable to attend class. If you are ill, you should always seek medical care first. When you are well enough, inform the instructor by email about the situation so that we can communicate about how you can maintain your academic progress. If you find yourself too sick to progress in the course, notify your adviser and notify me via email. We can work together for a positive solution to your absence when you are ready to meet with the instructor.

Only the instructor can excuse a student from a course requirement or responsibility. When conflicts or absences can be anticipated, such as for many University-sponsored activities and religious observations, the student should inform the instructor of the situation as far in advance as possible. For unanticipated or emergency absences when advance notification to the instructor is not possible, the student should contact the instructor as soon as possible by email or phone. When the student is unable to make direct contact with the instructor and is unable to leave word with the instructor's department because of circumstances beyond the student's control, and in cases falling under excused absence regulations, the student or the student's representative should contact the Office of the Dean of Students via email or phone at 765-494-1747 or go to the Office of the Dean of Students website to complete appropriate forms for instructor notification. The course Brightspace page includes a link to the Dean of Students under 'Campus Resources.' Under academic regulations, excused absences may be granted for cases of grief/bereavement, military service, jury duty, and parenting leave. For details, see the Academic Regulations & Student Conduct section of the University Catalog website.

Classroom engagement is extremely important and associated with your overall success in the course. The importance and value of course engagement and ways in which you can engage with the course content even if you are in quarantine or isolation, will be discussed at the beginning of the semester. Student survey data from Fall 2020 emphasized students' views of in-person course opportunities as critical to their learning, engagement with faculty/TAs, and ability to interact with peers.

Course Schedule

Week	Topic & Readings	Assignments
Week 1	Complexity analysis and asymptotic notation (pp. 27-66)	HW
Week 2	Insertion sort and Shellsort (pp. 253-300)	HW and PA

Week 3	Linked lists (pp. 90-108) and stacks (pp. 127-150)	HW and PA
Week 4	Recursions and space complexity (pp. 187-207)	HW and PA
Week 5	Queues (pp. 153-161) and trees (pp. 216-240)	HW and PA
Week 6	Height-balanced binary search trees (pp. 502-520)	HW and PA
Week 7	Heapsort (pp. 361-403), quicksort (pp. 303-335)	HW and PA, mid-term
Week 8	Quicksort (pp. 303-335), mergesort (pp. 335-361)	PA
Week 9	Non-comparison-based sorting (pp. 403-437)	HW and PA
Week 10	Graphs and traversals (pp. 3-40, 50-64, 75-106, 114-124)	HW and PA
Week 11	Graphs and traversals (pp. 3-40, 50-64, 75-106, 114-124)	HW and PA
Week 12	Topological sort of directed acyclic graphs (pp. 141-193)	HW and PA
Week 13	Minimum spanning trees (pp. 219-252)	HW and PA, mid-term
Week 14	Shortest path algorithms (pp. 265-290, 300-308, 331-350)	PA
Week 15	Hashing (pp. 573-608), B-trees (pp. 546-551, 655-676)	PA (re-submissions)

* Schedule and assignments subject to change. Any changes will be posted in the learning management system. The assignment column indicates that students are expected to work on homework exercises (HW) and/or programming assignments (PA) in that week. The presence of HW or PA does not imply that the HW or PA is due that week. There is a chance that a quiz will be released every week.

Academic Integrity

Any actions that might unfairly improve your grade will be considered cheating. For example, you are not allowed to use code from stackoverflow, geeksforgeeks, github, or any other websites. You are also not allowed to use code generated by ChatGPT or other generative AI tools. If you receive help from your classmates or the teaching staff for your exercise or assignment, acknowledge it, but you must submit only your own work!

You may still discuss ideas about exercises or assignments with your classmates in-person or on Piazza. However, you are not allowed to share solution, code, or pseudo-code that resemble working code. All programming assignments are subject to computer-based comparison and analysis. All submissions that are similar will be reported to the Dean of Students Office.

If you are a student who wants to get some help from your classmate, do not ask your classmate for their solution. Instead, describe your solution at a high level and ask your classmate whether your solution makes sense. If your classmate begins to offer their solution, stop them from doing so. Instead, insist on getting your classmate to critique your approach. If your approach is incomplete, a good classmate would offer your counter-examples that you can work through so that you can understand why your approach is not complete.

If you want to help your classmate, keep in mind that the best way to help your classmate is not to share your solution; that simply deprives your classmate of a good learning opportunity. If the approach presented by your classmate has

issues, suggest counter-examples and ask your classmate to apply their approach on the counter-examples. Ask your classmate questions that may help them to find flaws in their original approach and eventually find their own working solution. If you do not know how to do it properly, refer your classmate to the teaching staff.

The instructors own the copyright of most of the course materials (lecture slides, recorded videos, homework exercises, programming assignments, and exams, and other relevant materials released throughout the semester). Such materials cannot be sold or bartered. **You are not allowed to upload or share any of these materials with commercial websites such as Course Hero, Chegg, or Quizlet.**

Academic integrity is one of the highest values that Purdue University holds. Individuals are encouraged to alert university officials to potential breaches of this value by either emailing or by calling 765-494-8778. While information may be submitted anonymously, the more information that is submitted provides the greatest opportunity for the university to investigate the concern.

Please keep in mind the student-initiated Purdue Honor Pledge: "As a boilermaker pursuing academic excellence, I pledge to be honest and true in all that I do. Accountable together - we are Purdue."

You may also want to refer to Purdue's *student guide for academic integrity*.

Incidents of academic misconduct in this course will be addressed by the course instructor and referred to the Office of Student Rights and Responsibilities (OSRR) for review at the university level. Any violation of course policies as it relates to academic integrity will result minimally in a failing or zero grade for that assignment, and at the instructor's discretion may result in a failing grade for the course. In addition, all incidents of academic misconduct will be forwarded to OSRR, where university penalties, including removal from the university, may be considered.

Nondiscrimination Statement

Purdue University is committed to maintaining a community which recognizes and values the inherent worth and dignity of every person; fosters tolerance, sensitivity, understanding, and mutual respect among its members; and encourages each individual to strive to reach his or her own potential. In pursuit of its goal of academic excellence, the University seeks to develop and nurture diversity. The University believes that diversity among its many members strengthens the institution, stimulates creativity, promotes the exchange of ideas, and enriches campus life. Link to Purdue's nondiscrimination policy statement.

Accessibility

Purdue University strives to make learning experiences as accessible as possible. If you anticipate or experience physical or academic barriers based on disability, you are welcome to let me know so that we can discuss options. You are also encouraged to contact the Disability Resource Center at: **drc@purdue.edu** or by phone: 765-494-1247.

It is important for you to reach out to the instructors for any accommodations.

Emergency Preparation

In the event of a major campus emergency, course requirements, deadlines and grading percentages are subject to changes that may be necessitated by a revised semester calendar or other circumstances beyond the instructor's control. Relevant changes to this course will be posted onto the course website or can be obtained by contacting the

instructors or TAs via email or phone. You are expected to read your @purdue.edu email and Brightspace announcements on a frequent basis.

You may want to keep your cell phone on (but on vibrate mode) to receive a Purdue ALERT text message.

Purdue University is a very safe campus and there is a low probability that a serious incident will occur here at Purdue. Nonetheless, emergency preparedness is your personal responsibility. Purdue University is actively preparing for natural disasters or human-caused incidents with the ultimate goal of maintaining a safe and secure campus. Please keep the following procedure in mind:

- For any emergency text or call 911.
- There are more than 300 Emergency Telephones (aka blue lights) throughout campus that connect directly to the Purdue Police Department (PUPD). If you feel threatened or need help, push the button and you will be connected right away.
- If we hear a fire alarm, we will immediately evacuate the building and proceed to the Emergency Assembly Area (EAA), which is the sidewalk away from the building and building entrances across the street by parking garage. In case of inclement weather, you should proceed to Purdue Memorial Union or Grissom Hall. Do not use the elevator.
- If we are notified of a Shelter in Place requirement for a tornado warning, we will shelter in basement corridors, basement offices, basement restrooms, or the lowest level of the building (and stay away from windows and doors).
- If we are notified of a Shelter in Place requirement for hazardous materials, we will remain in our classroom or find an unaffected office or work area, and close windows and doors.
- If we are notified of a Shelter in Place requirement for an active threat such as a shooting, we will shelter in our classroom shutting any open doors and windows.

Mental Health Statement

- **If you find yourself beginning to feel some stress, anxiety and/or feeling slightly overwhelmed, try WellTrack.** Sign in and find information and tools at your fingertips, available to you at any time.
- **If you need support and information about options and resources**, please contact or see the Office of the Dean of Students. Call 765-494-1747. Hours of operation are M-F, 8 am- 5 pm.
- **If you find yourself struggling to find a healthy balance between academics, social life, stress**, etc. sign up for free one-on-one virtual or in-person sessions with a Purdue Wellness Coach at RecWell. Student coaches can help you navigate through barriers and challenges toward your goals throughout the semester. Sign up is completely free and can be done on BoilerConnect. If you have any questions, please contact Purdue Wellness at evans240@purdue.edu.
- **If you're struggling and need mental health services:** Purdue University is committed to advancing the mental health and well-being of its students. If you or someone you know is feeling overwhelmed, depressed, and/or in need of mental health support, services are available. For help, such individuals should contact Counseling and Psychological Services (CAPS) at 765-494-6995 during and after hours, on weekends and holidays, or by going to the CAPS office of the second floor of the Purdue University Student Health Center (PUSH) during business hours.
- TaskHuman offers 1-on-1 live video calls with coaches who help you focus on wellness topics such as anxiety, mindfulness, reducing stress, clean eating, time management, in-home workouts, relationship tensions, and nearly a thousand more topics. You can log on at any time to access experiences as diverse as working through heightened anxiety to a personalized yoga session with carefully vetted providers. Purdue ECE has an exclusive agreement with TaskHuman which gives you unlimited access to these resources (and some Purdue-specific bonuses). Using this link gets you access to all the perks: https://taskhuman.com/referral/purdue. Learn more

here: https://engineering.purdue.edu/ECE/TaskHuman. Don't see a topic you want or have other questions? Contact Brooke Parks, Lead Instructional Specialist in ECE, at brookeparks@purdue.edu.

- The Community, Assistance and Resources for Engineering Students (CARES) Hub is available to support the well-being of all engineering students. The CARES Hub, located in ARMS 1261 and 1264, is a welcoming, inclusive space for students to study, connect, grab a snack, and relax during the week. CARES also offers wellness activities, educational workshops, peer mentoring, social events, and on-site counseling. If you need help handling stress or working through a problem, schedule time with our CARES Hub therapist, Jennie Beutler, here or drop by ARMS 1251 to speak to Jennie without an appointment during her **Walk-In Hours** from 1:00 – 2:00 p.m. Monday-Friday. Please visit the CARES Hub webpage to learn more. The CARES staff look forward to connecting with you!

Basic Needs Security

If you face challenges securing food or housing and believe this may affect your performance in the course, please contact the Dean of Students for support. There is no appointment needed and Student Support Services is available to serve students 8am – 5pm Monday through Friday.

Course Evaluation

During the last two weeks of the course, you will be provided with an opportunity to evaluate this course and your instructor. Purdue uses an online course evaluation system. You will receive an official email from evaluation administrators with a link to the online evaluation site. You will have up to two weeks to complete this evaluation. Your participation is an integral part of this course, and your feedback is vital to improving education at Purdue University. I strongly urge you to participate in the evaluation system.

Disclaimer

This syllabus is subject to change. Changes to the syllabus will be announced through Brightspace, and the updated syllabus will be posted on Brightspace.
