Materials Engineering

Turn raw materials into the amazing things we use every day and invent the new materials of tomorrow. Explore nanotechnology, biomaterials, aerospace and more as you learn to control metals, plastics, ceramics and composites to create better and more sustainable products and technologies.

Program Summary

Materials engineering shapes the world around you, from smartphones to airplanes to biomedical implants. In this program, dive into the science of metals, plastics, ceramics, composites and more— learning how to control their properties at the atomic and

microscopic levels to create custom solutions. Materials engineers are driving innovation in fields like nanotechnology, healthcare, energy, aerospace and consumer products. With this degree, you'll be ready to tackle the world's biggest challenges, lead diverse teams or even launch a career in law, medicine or research.

Applying to Engineering in West Lafayette

To study materials engineering in West Lafayette, you will apply to the first-year engineering program. All engineering students in West Lafayette build a foundation for success by completing core first-year engineering curriculum before transitioning to a specialty major in the second year. Core curriculum includes courses in math, chemistry, physics, computer programming and communication skills, as well as introductory engineering coursework that explores career options to help you identify which specialty major is the right fit.

The priority application deadline for first-year engineering is Nov. 1. Applications received after Nov. 1 for this competitive major will be evaluated based on available space.

Possible Careers

Our students solve critical engineering challenges across nearly every technology and industry in careers such as:

- Aerospace materials specialist
- Biomedical materials engineer
- Corrosion engineer
- Materials engineer
- Nanotechnology engineer

- Patent examiner
- Product development engineer

Transfer to Materials Engineering

Purdue admits to individual majors. Transfer students must meet Purdue's overall transfer criteria, as well as any major-specific requirements. Before you apply, check the closed programs page to confirm this major is open to transfer students. If it is, refer to the information below for major-specific transfer criteria.

- Minimum 3.0 GPA
- For detailed admissions requirements to transfer into any of Purdue's engineering majors, review our engineering transfer criteria.
